

CUSTOMIZED AND CONNECTED:
**THE POWER OF
COMPANY-WIDE
STANDARDIZATION**

Technology is often the solution on which manufacturers rely to add growth and efficiency. But good intentions don't always lead to better operations. In fact, using software products and systems from multiple vendors creates disconnected point solutions both within a location and throughout an enterprise. As a result, user experiences are vastly different and user acceptance can be negatively affected. Data sources are fragmented, which jeopardizes successful integration. And the time and money it takes to maintain and upgrade each system is an ever-present burden. The more future-proof alternative is to have a singular system with Plex ERP and MES across all locations, so you can rely on Plex to create more connections — securely — with real-time data that helps you focus on building your business.

01
**Connected
Processes**

Running both Plex ERP and MES as the standard systems across your locations helps you make the connections you've been missing. Instead of spending time tracking down information — that may not be current by the time you find it — Plex provides a reliable stream of real-time data that is easy to access and share. So from the top floor to the plant floor, you can concentrate on solving problems and building strategies.

02
**Current and
Secure Software**

As a manufacturer, your focus is to build with quality and purpose — not to be in the IT business. Take IT needs like prioritizing cybersecurity, streamlining disparate capabilities, and managing upgrades and repairs off your to-do list when you standardize locations with Plex ERP and MES. Plex makes it possible to rely on one dependable vendor to keep your processes running securely and more efficiently, and do it all without surprises to your software update budget and timeline.

03
**Efficiency and
Scalability**

Standardizing operations with Plex ERP and MES puts new efficiencies within reach. With a real-time view of the entire production lifecycle across all plants, teams are empowered to use that data to communicate their needs and make a positive impact on processes. It also adds flexibility, so when market and customer demand inevitably change, it becomes easier to scale up or down without major workflow disruptions. Overall, standardization can help drive performance, delivering new ways to increase revenue and reduce costs.

CUSTOMIZED AND CONNECTED:
THE POWER OF COMPANY-WIDE STANDARDIZATION

VICTORIA BELTRAN
PACUR, DIRECTOR OF SYSTEMS

LOCATION
OSHKOSH, WISCONSIN

“Based in Oshkosh, Wisconsin, Pacur is an ISO 9001 certified custom sheet extruder of light and heavy gauge polyester, copolyester, and polypropylene resins for medical, food, and electronics packaging, with a focus on sustainable packaging. By standardizing Plex across their locations, Pacur gained a holistic view of their operations and can now make critical business decisions faster to support future growth. “Now that we understand the amount and quality of data that we can get out of Plex, we really emphasize the importance of the information that’s going into Plex so we can drive a higher level of accountability and insight,” said Victoria Beltran, Pacur Director of Information Systems.”

01
Actionable Data

- Full data visibility throughout the production lifecycle
- Common user experiences for better team communication and data sharing
- Better information for planning and risk mitigation
- Create best practices that can be adopted throughout organization

02
Streamlined IT

- Easier to maintain cybersecurity with one system
- Capabilities work together to deliver more solutions
- Consistency and predictability for IT budget and timeline
- Free up time and resources that had been spent on IT issues

03
Specialized Solutions

- Customize your deployment to suit your needs
- Flexible configuration settings, with setup tables, security, and reporting for multiple sites
- Integration layer designed to facilitate connectivity to outside solutions
- Connect everything from plant floor to production control, to top-floor financials and more
